SUBJECT INDEX

accessibility of patent documents 10(1) 7
ADABAS to hold text data 10(1) 41
adaptability of invention, testing 10(3) 179
age of documents cited in search reports 10(4) 232
AIPPI 10(3) 171
alternative technology, searching for 10(1) 9
anniversary of the EPO 10(2) 104–107
Annual Technical Reports 1987, survey of 10(4) 253
artificial intelligence, development of 10(3) 202
artificial intelligence techniques applying to patent information retrieval 10(1) 26–36
artificial intelligence technology, relevance for information retrieval 10(1) 32
ARUANDA — PATENTES database 10(1) 18
assessing the relevance of a document 10(3) 177
automated searching as an expert system 10(1) 32
automatic indexing 10(1) 30
availability of patent documents 10(1) 7

Beilstein database online 10(3) 208
bibliometric study of patent literature 10(4) 237
BIO-ROM (Derwent) 10(3) 207
BIRPI, in relation to origin of INPADOC 10(3) 172
Brazil, technological information diffusion in 10(1) 17–19
British Library Biotechnology Service 10(3) 209
BRS database 10(3) 201

CAS Online database content 10(1) 12
CD-ROM and international cooperation 10(1) 40
CD-ROM, use of for patent information 10(1) 37–40
CEDIN in Brazil 10(1) 17
central support for libraries, comparison of 10(2) 118
characteristics of patent documents 10(1) 6
Chemical Abstracts database, content of 10(1) 11
Chemical Abstracts used for mapping the scientific network of documents 10(2) 133–149
CIBERPAT — Spanish bibliographic database 10(2) 108
CIT (citation) field in CLAIMS files 10(3) 205
citation analysing 10(3) 204
citations, searching for in databases 10(1) 13
CJACS file of STN International 10(3) 201
CLAIMS Patent Files database, content of 10(1) 11, 12
CLINPAT — database of IPC text in Spanish 10(2) 108
command language 10(1) 14
comparative evaluation of patent information in scientific research 10(3) 175–180
comparison of British and French strategies in polymer chemistry 10(2) 138
comparison of library services 10(2) 117
comparison of patent databases 10(1) 11–16
comparison of Patent Deposit Library resources 10(2) 114–119
computer based publishing in the Australian office 10(1) 41–45
concept-based searching 10(3) 202
consulting the EPO documentation of the future, paper or computer? 10(4) 229
contracting states of PCT 10(2) 99
criteria for user-oriented online systems 10(3) 199
cross-file searching 10(1) 14
crossover searches on STN 10(3) 201

DARC-CHEMLINK software 10(3) 208
DARC-SMS software 10(3) 208
database machines 10(2) 122

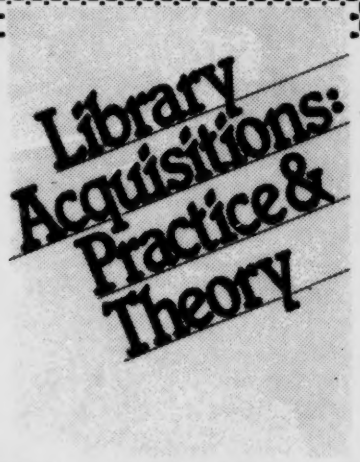
Library Acquisitions: Practice and Theory

Experiential and Theoretic—
and a significant source of acquisitions information.



Editor-in-Chief:
Scott R. Bullard
Head, Acquisitions Department
Kent State University
Kent, OH

LIBRARY ACQUISITIONS: PRACTICE AND THEORY provides a forum for the exchange of ideas and experiences among members of the library acquisitions, collection management, and bookselling communities throughout the world.

Published quarterly, it is a comprehensive publication designed to bring together many of the specializations within the broad areas of library acquisitions and collection management, including, but in no way limited to, books and serials in academic, public, school, and special libraries; government publications; gifts and exchanges; microforms and other nonprint media, such as videodiscs and computer software; and pertinent library automation projects.

The journal emphasizes the practical experience of working librarians and their staffs, while at the same time presenting the concepts developed by leading theoreticians in the field. Don't miss out on this valuable information source. Subscribe today!

A Selection of Articles

Richard Abel, The Librarian as Synthesizer.

Thomas W. Leonhardt, The Acquisitions Librarian as Informed Consumer: "Mad as Hell, and Not Going to Take it Anymore!"

Marcia Tuttle, Quality—It's Expensive—Can We Afford It?

Meta Nissley, Optical Technology: Considerations for Collection Development.

Subscription Information

Published 4 issues per annum	ISSN 0364-6408	Volume 13, 1989
One-year institutional rate (1989)		US$ 75.00
Two-year institutional rate (1989/90)		US$142.50
Individual* rate (1989)		US$ 45.00

*Available only to those whose libraries subscribe.

FREE SAMPLE COPY AVAILABLE UPON REQUEST.

Prices are subject to change without notice. Send your order to your regular supplier or your nearest Pergamon office. For subscription rates outside the Americas, apply to the nearest Pergamon office. Journal prices include postage and insurance.

WORLD PATENT INFORMATION

Aims and Scope

The aim of *World Patent Information* is to provide a worldwide forum for the exchange of information between people working professionally in the patent information and documentation field and to promote the use of the patent literature for other than legal purposes.

Regular features include:

- New regulations pertinent to patent information and documentation;
- Advance notices and short reports on meetings and conferences on patent information;
- Bibliographies and book reviews.

Notes for Contributors

General

The Editor-in-Chief will be pleased to receive contributions from all parts of the world and manuscripts for publication should be submitted to him. Contributions may also be communicated via members of the Editorial Advisory Board.

Only papers not previously published will be accepted, and authors must agree not to publish elsewhere a paper submitted to and accepted by the Journal.

The language of the Journal is primarily English. Manuscripts submitted in other languages may be considered at the discretion of the Editor-in-Chief.

Reprints of each paper can be purchased on a reprint order form which will accompany the proofs.

Manuscript Requirements

Manuscripts should be typed double spaced on one side of the page only with wide margins. While no maximum length of contributions is prescribed, authors are encouraged to write concisely.

The title should be brief. The author's name should be typed on the line below the title with affiliation and address below. In the case of co-authors, respective addresses should be clearly indicated, as well as which author is to receive correspondence and proofs for correction. The body of the manuscript should be preceded by a summary.

Illustrations and tables should accompany the script but should not be inserted in the text. All photographs, charts and diagrams must be referred to as 'figures' and should be numbered consecutively in the order in which they occur in the paper. Line drawings should include all relevant details and should be drawn in black ink on plain white drawing paper or tracing cloth. Good photoprints are acceptable, but blueprints or dye-line prints cannot be used. Drawings, etc. should be about twice the final size required and lettering must be clear and 'open', and sufficiently large to permit the necessary reduction of size for publication. The following standard symbols should be used on line drawings since they are easily available to the printers: ○, ●, +, ×, ■, □, △, ▲, ◇, ◆, ▽, ▼. Photographs should be sent as glossy prints. If words or numbers are to appear on a photograph two prints should be sent, the lettering being clearly indicated on one print only.

References to published literature should be quoted in the text in parentheses and grouped together at the end of the paper in numerical order. Double-spacing must be used throughout.

Journal references should be arranged thus:

(1) R. M. Duchesne, Patent library service in the United Kingdom. *Journal of Librarianship* **2**, 196–204; 1970.

(2) O. J. Firestone, *Economic Implications of Patents*. University of Ottawa Press, Ottawa, Canada, 1971.

Abbreviations of journal titles should follow those given in *World List of Scientific Periodicals* (4th Edn). It is particularly requested that author's initials, and appropriate volume and page numbers, should be given in every case.

Footnotes, as distinct from literature references should be indicated by the following symbols: *, †, ‡, §, ¶, ‖, commencing anew on each page, they should *not* be included in the numbered reference system.

Because of the international character of the Journal, no rigid rules concerning notation or abbreviation need be observed by the authors, but each paper should be self-consistent as to symbols and units, which should all be properly defined.

The original manuscript and diagrams will be discarded after publication unless the Publisher is requested to return original material to the author.
